2024 Feedback

"Enjoyed the diversity of speakers and subjects.
Great mix of technical software and industry issues"

"Improved my awareness of the state of the art in
high integrity software"

"Great for networking"

About the event

The mission of the High Integrity Software Conference (HISC) is to share challenges, best practice and experience between software engineering practitioners. The conference features talks from industrial and academic specialists which disseminate experience and knowledge of important techniques and methods that are applicable across industry sectors.

2024 Feedback

"One of the great things about the HISC conference are the attendees. We've got a big range of people, from the most senior decision makers down to the practitioners, who are all here basically to learn and change the world."

Professor John Goodacre - Challenge Director for Digital Security by Design, UKRI

"We're gathering all the experts around the world to talk about a set of critical applications so as to make the work safer and innovative."

Thuc Nguyen Tri - Technical Programme Manager, EUROCAE

2024 Feedback

"Company boundaries have been broken down. We can have open conversations with vendors, competitors, customers, suppliers and it's just a really brilliant opportunity to see what's going on around the business, around industry and learn what we can take away and what we can do better."

Lee Jacques - Head of Software, Leonardo Electronics

"I was not expecting to discover that multiple industries are going towards the same issues. It has been incredibly useful to discuss with colleagues and with the speakers about those common issues and possible common solutions."

Lucia Capogna - Cyber Security and Software Assurance Team
Leader, Systra

200+ Delegates
20+ Exhibitors

Government | Academia | Industry
Critical Software | Major Programmes

Why sponsor HISC?

- Network with **200+ UK and international delegates** from high-integrity software domains across **Government, Academia and Industry**
- Get insights into **future directions for high-integrity software development**
- Stay up-to-date on **major programmes and industry trends**

2025 Call for Presentations (CfP)

The following types of presentation are invited:

- **Industrial experience:** reports based on industrial experience of high-integrity and high-assurance software development
- **High-Technology Readiness Level (TRL) Research & Design (R&D):** presentations of technologies that support high-integrity software development and are available or close to being available in an industrial setting
- **Challenges:** talks about fundamental challenges being faced by the high-integrity software industry - technological or otherwise - and potential solutions

CfP Presentation Theme 1

Submissions are invited for presentations on four themes.

1: The application of Generative AI to the development of dependable software; including:

- Opportunities of GenAI: novel applications, responding to urgent operational needs
- GenAI in the early lifecycle phases: requirements, specification, modelling
- GenAI applied to assurance activities: verification, testing, reviewing
- Risks specific to GenAI and how these can be mitigated
- Case study reports of successful application of GenAI-based tools
- Combination of GenAI and other technologies (formal methods, knowledge/semantic models)

CfP Presentation Theme 2

Submissions are invited for presentations on four themes.

2: Enhancing cybersecurity for critical applications, including:

- Cybersecurity as a system property
- The role of the “cyber-informed engineer”
- Developments in standards and regulation
- Formal-methods & analysis techniques
